

A READING COMPANION FROM THE AI SALON TLV COMMUNITY

AI & Human Flourishing

Seven quotes and seven working models
from *AI and the Art of Being Human* —
curated to encourage and inspire AI
builders to build conscious AI systems.

AI AND THE ART OF BEING HUMAN

AI and the Art of Being Human

Jeffrey Abbott & Andrew Maynard

A practical guide to thriving with AI while rediscovering yourself in the process.

01

The Event

Monday, July 13, 2026 · 18:00 — 21:30 IDT
Elementor Offices · 15th floor, Sapir Tower · Ramat Gan, Israel

What does it mean to be human in the age of AI?

18:00	NETWORKING	Door opening
18:30	WELCOME	Welcoming community Ezequiel Sznaider · Chapter Lead, AI Salon TLV
18:45	TALK	Real-world impact of AI Nir Lavion · CTO, HI4.AI
19:00	TALK	How We Brought AI to Elementor Together Adi Fine · CHRO, Elementor
19:15	TALK	What does it mean to be human in the age of AI? Dan Ariely · Author and professor, Duke University
19:45	BREAK	Break
20:00	PANEL	Being human in the era of AI Moderator: Ezequiel Sznaider · Panelists: Dan Ariely, Shuki Cohen, Noam Inbar, Dennis Nerush, Ido Vapner, Eyal Rond

02 THE BOOK

A practical guide to thriving with AI.

This booklet distills *AI and the Art of Being Human* into seven of its sharpest sentences and seven of its working models — the ones the AI Salon TLV community will be referencing throughout the evening.

Each model is a small practice you can run in fifteen minutes: a mirror to see what your system reflects, a spectrum to locate your work, a matrix to map your identity, a loop to convert defensiveness into curiosity, a canvas to shape how you talk with AI, a triangle to conduct AI where the stakes are real, and a starter kit to gather a circle of your own.

Take notes in the margins. Argue with the quotes. The point of the evening is not to agree — it is to leave with better questions.

ENGAGE — EXPLORE THE PLATFORM

Work with the models yourself — locate your work on the spectrum, map your identity, run a curiosity loop, scaffold a real prompt. Scan the QR on the back cover.

03 WHY THIS SECTION

Working tools, not abstractions.

The quotes and models that follow are not abstractions. They are working tools for people who ship AI products and want to ship better ones — sharper questions, clearer boundaries, a more honest map of what AI can do and what only humans can do.

Read them slowly. Notice which one lands and which one stings.

GO DEEPER — GET THE BOOK

The full framework lives in *AI and the Art of Being Human* by Jeffrey Abbott & Andrew Maynard — available on Amazon. The source for every quote and model here.

01

START HERE · THE OPENING
DIAGNOSTIC

01 TOOL · MODEL

The Mirror Test

Before you trust what an AI shows you — or ship what it produces — hold it to the mirror. Every algorithm reflects the choices of the people who built and trained it. The question is whether you can see the tint in the glass.

i.

REFLECTION

What is it showing back?
Name what the output actually is — your patterns, the data's patterns, a confident surface. The mirror shows what you do, not yet what you should.

ii.

ASSUMPTION

What does it call normal?
Ask whose data was loud enough to set the default. A model trained on the loudest voices will present their worldview as neutral. Find the "normal" it quietly assumes.

iii.

**THE UN-
MIRRORABLE**

What can't it show? The context it was never given, the values no one logged, the person the data forgot. What the mirror omits is exactly where your judgment has to live.

RUN IT · 10 MINUTES

Take one real output from a system you're building or using. Ask the three questions in order — reflection, assumption, omission — and write one sentence for each. The omission is usually the most important sentence you'll write today.

"The mirror of AI shows us what we do. The question is: what will we choose to become?"

CHAPTER 3 · P.87

For builders: a system that never asks these questions doesn't become neutral — it becomes a mirror with someone else's values baked in. Conscious building starts by naming the tint.

02

LOCATE YOUR WORK

02 TOOL ·
MODEL

Human Qualities Spectrum

A way to understand which human qualities AI can replicate — and which remain uniquely ours. Not a hierarchy: we need all three.

REPLICABLE	RELATIONAL	TRANSCENDENT
Skills AI can master — calculation, pattern, style.	Presence, context, the room — AI joins but misses the current.	Meaning, moral imagination — what arises from being human.

INVEST YOURSELF

Not a hierarchy — we need all three. But stop pretending the left end makes you irreplaceable.

"But walls don't stop water. They just influence where it flows — and where it floods when they break."

CHAPTER 1 · P.25 · QUOTE 01 / 07

03

MAP YOUR IDENTITY

03 TOOL · MODEL

Identity Matrix

A map to help distinguish what AI can automate from what makes you irreducibly you.

CORE + SURFACE

01 ENDURING ESSENCE Who you are across every context.	02 EVOLVING EXPRESSION Same core, new manifestations.
03 REPLACEABLE SKILLS What AI can learn – even the ones you're proud of.	04 YET TO BE CULTIVATED Latent abilities you've postponed.

↑ FOCUS GROWTH HERE

"The question isn't 'What can't AI do?' It's 'What will I choose to cultivate, regardless of what AI can do?'"

CHAPTER 3 · P.80 · QUOTE 05 / 07

04

CONVERT DEFENSIVENESS
INTO CURIOSITY

04 TOOL · MODEL

The Curiosity Loop

A repeatable practice that transforms defensive reactions into learning opportunities when facing technological change.

01 NOTICE
Observe your reaction.

02 QUESTION
Challenge — it surprised you?

03 EXPERIMENT
Take one small action.

04 REFLECT
Curiosity isn't only about learning — it's about thriving through change.

"In a world obsessed with having the correct answers, the real competitive advantage might come from asking better questions."

CHAPTER 1 · P.39 · QUOTE 04 / 07

A practice, not a one-time exercise — each pass turns defensiveness into a question.

05

SHAPE HOW YOU TALK
WITH AI

05 TOOL ·
MODEL

Prompt-Scaffolding
Canvas

Four quadrants to shape the full creative partnership with AI — not just the opening prompt. Each corner runs through one of the four postures.

Frame INTENTIONALITY Why you're creating and for whom — the emotional core.	Fuel CURIOSITY Feed unexpected combinations — references, moods, collisions.
Flip CLARITY Invert an assumption — what if the villain is the hero?	Filter CARE Practical & ethical boundaries — respects sources, opens possibilities.

"If your company disappeared tomorrow, who would miss it and why?"

CHAPTER 3 · P.84 · QUOTE 06 / 07

From you, to the room, to the world.

The five models so far pointed inward — they helped you see what AI reflects, locate your work, map your identity, turn defensiveness into curiosity, and shape how you talk with AI. A conscious builder who stops at themselves has done only half the work. The last two models carry the practice outward: first into the organization where you make real decisions, then into a community you convene yourself. **This is how a reader becomes a convener.**

06

CONDUCT AI WHERE STAKES ARE REAL

06 TOOL · MODEL

The Orchestration Triangle

Three ways of knowing — Data, Intuition, Context. The point is not to pick one but to conduct all three, so you stay the conductor of AI instead of being conducted by it.

DATA (D)

What the model can measure and optimize. Fast, scalable, and blind to everything it wasn't given.

INTUITION (I)

The practitioner's felt sense — pattern earned over years that hasn't been written down yet.

CONTEXT (C)

The room, the market, the town. What the numbers can't price but everyone will feel.

RUN IT · 15 MINUTES

Write tomorrow's biggest decision in the center of a triangle. Mark where it's currently landing — and name the corner going silent. If you're leaning entirely on the model's data, say so out loud. Then ask what changes when intuition and context are given a vote again.

*"The real returns come from
integration. Not balance.
integration."*

*"Locally intelligent, not just
artificially intelligent."*

07

GATHER OTHERS — START
A CIRCLE OF YOUR OWN

07 TOOL ·
MODEL

The Micro-Circle Starter Kit

The smallest viable community is three people and a check-in. You don't need thirty, a venue, or permission — just two others willing to show up, and a way to open the room.

If the room wants to keep meeting, work through the Starter Charter on the right.

OPEN THE CIRCLE · THE THREE-QUESTION CHECK-IN

CURIOSITY

What made you curious this week — one thing AI did that you didn't expect?

CONCERN

What raised a concern — where did something feel off, unfair, or too easy?

CARE

Where did care lead you — what did you choose to protect or slow down for?

THE STARTER CHARTER · FOUR QUESTIONS, 30 MINUTES

i.

PURPOSE

One sentence: why this circle exists.

ii.

NORMS

How you'll be together — candor, confidentiality, no selling.

iii.

CADENCE

Together, how often, how long, where. Small and sustainable wins.

iv.

ROLES

Who convenes each time. Rotate, so no hierarchy hardens.

Start or find a circle in your city. **AI Salon** is a global community of AI enthusiasts across 70+ cities — and always room for one more. aisalon.ai

THREE CLOSING QUOTES

From Chapter 3 onward.

QUOTE 05 · CHAPTER 3 · P.80

"The question isn't 'What can't AI do?' It's 'What will I choose to cultivate, regardless of what AI can do?'"

QUOTE 06 · CHAPTER 3 · P.84

"If your company disappeared tomorrow, who would miss it and why?"

QUOTE 07 · CHAPTER 3 · P.84

"The leaders we need now don't compete with machines — they use them to amplify what humans alone choose to care about."

Take these with you. Argue with them. Notice which one stings. The point is not to agree with the authors — it is to leave with sharper questions than you brought in.
