

The Qwen Activation Sessions

— 6 talks, 12 months, one model family.

An exclusive speaker series built entirely around the Qwen LLM family. At every bi-monthly flagship event, an AliExpress technical or executive expert delivers a dedicated 20-minute "AI Insight" presentation. This document outlines the six sessions, their abstracts, and the early-access benefits unlocked for the AI Salon Tel Aviv community.

Qwen-Max

★ FEATURED · FLAGSHIP

Qwen-Max in Production: Powering Agent-Driven Catalog Reasoning at AliExpress

AliExpress's flagship reasoning model isn't a research demo — it's the engine behind agent-driven product discovery, cross-language search, and global catalog reasoning at marketplace scale. This opening session walks the audience through a live deployment: how Qwen-Max reasons over a catalog of hundreds of millions of SKUs, orchestrates tool-use across AliExpress's internal APIs, and returns grounded answers in 18 languages. **Format:** 20-minute technical talk + 10-minute live demo of the production pipeline.

 AliExpress Principal Engineer (Qwen-Max team)

 20 min talk + 10 min Q&A

COMMUNITY EARLY ACCESS

Private Qwen-Max API sandbox (30-day access) + \$2,000 in Qwen-Max API credits, distributed to AI Salon TLV founders who attend. Sandbox includes rate-limited access to the same Qwen-Max endpoint that powers AliExpress's internal agents.

Qwen-VL-Max

Qwen-VL-Max for Retail: Multimodal Product Understanding at Scale

Vision-language models are reshaping retail search. This session covers how Qwen-VL-Max understands product imagery at scale: image-based product search, visual question answering over a catalog, automated alt-text generation for accessibility, and counterfeit detection from visual cues. The talk includes a benchmark comparison against closed alternatives on a curated retail-vision dataset, and a roadmap for what's coming in Qwen-VL-Next. **Format:** 20-minute technical talk + hands-on demo with a sample catalog.

 AliExpress Vision-Language Research Lead  20 min talk + 10 min demo

COMMUNITY EARLY ACCESS

Qwen-VL-Max preview API access (60-day) + a curated retail vision dataset (10,000 annotated product images) for AI Salon TLV founders to benchmark against their own models. Includes a reference notebook for multimodal product search.

Qwen-Coder

Agentic Coding with Qwen-Coder: Building Tools for the AliExpress Catalog

Qwen-Coder is Alibaba's open-weight coding model, optimized for agentic tool-use and repository-scale reasoning. In this hands-on workshop session, AliExpress engineers demo a live build: a Qwen-Coder-powered agent that reads the AliExpress public API spec, generates typed TypeScript SDK bindings, and ships a working product-search widget in under 20 minutes. Attendees follow along on their laptops. **Format:** 20-minute live-coding session + 10-minute pair-programming lab.

 AliExpress Developer Advocate (Qwen-Coder team)  20 min live-coding + 10 min lab

COMMUNITY EARLY ACCESS

Qwen-Coder dev seats (free 90-day Qwen-Coder-Max access) + pair-programming lab with AliExpress engineers after the session. Includes the full demo repo, the AliExpress public API sandbox, and a starter kit for building commerce-aware coding agents.

Qwen3 Open

Open-Weight Qwen3 Fine-Tuning Lab: Hebrew, Retail, and Beyond

Qwen3's open weights give any team the ability to fine-tune a frontier-class model on their own domain. This session is a working lab: AliExpress AI engineers walk attendees through fine-tuning Qwen3-7B on a Hebrew-language retail dataset (Hebrew product descriptions, customer reviews, and support tickets). Topics covered: LoRA vs full fine-tuning trade-offs, Hebrew tokenizer considerations, evaluation metrics, and deployment on a single H100. **Format:** 20-minute walkthrough + 30-minute hands-on lab.

 AliExpress Fine-Tuning Research Engineer

 20 min walkthrough + 30 min lab

COMMUNITY EARLY ACCESS

Free fine-tuned Qwen3-7B instance per AI Salon TLV startup + 40 hours of H100 compute on Alibaba Cloud. Includes the Hebrew retail fine-tuning dataset and a reference training script. Founders leave with a working Hebrew-aware retail model.

Qwen-Agent

M10 OCT

Qwen-Agent at Scale: Orchestrating Multi-Step Commerce Workflows

Qwen-Agent is Alibaba's open framework for building LLM agents that plan, call tools, and execute multi-step workflows. This session covers production deployment patterns: how AliExpress uses Qwen-Agent to orchestrate inventory reconciliation, dynamic pricing, and customer-support routing across 18 markets. Includes a deep-dive on the agent's planning loop, tool-use error recovery, and observability stack. **Format:** 20-minute technical talk + 10-minute architecture Q&A.

 AliExpress Agent Platform Lead  20 min talk + 10 min Q&A

COMMUNITY EARLY ACCESS

Qwen-Agent framework early access (pre-public release) + three reference implementations for retail ops: inventory reconciliation, dynamic pricing, and customer-support routing. Founders can fork these agents and adapt them to their own operations.

Qwen-Next

 YEAR-CAP · HEADLINE

M12 DEC

Qwen-Next Preview: Inside the Roadmap with the Qwen Leadership Team

The closing session of the year is a roadmap preview. The Qwen leadership team walks the AI Salon TLV community through the 2027 Qwen roadmap: the Qwen-Next architecture, on-device variants, agentic capabilities, and the long-term vision for retail-commerce AI. This is a closed-door preview — attendees are the first outside Alibaba to see the roadmap. The session ends with a 30-minute

open Q&A. **Format:** 20-minute roadmap keynote + 30-minute open Q&A.

Qwen Leadership Team (TBD — Head of Qwen or designate)

20 min keynote + 30 min Q&A

COMMUNITY EARLY ACCESS

Qwen-Next closed-beta seats (limited to 10 AI Salon TLV startups) + co-authored whitepaper with AliExpress on "The 2027 Retail-AI Roadmap." The whitepaper is published under a joint byline and distributed across the global AI Salon network (59 chapters, 130K+ registrations).
